

Aftercare Instructions

Proper aftercare keeps your nails looking fresh and protects your natural nail underneath.

First 24 Hours

- Avoid submerging nails in water for extended periods (baths, swimming, washing up without gloves).
- Do not pick, peel, or bite at your nails or enhancements.
- Avoid heavy impact or using nails as tools.
- Apply cuticle oil to hydrate the nail bed and surrounding skin.
- If a nail lifts, do not glue it yourself — contact us for a repair.

Ongoing Maintenance

- Apply cuticle oil daily to maintain flexibility and prevent dryness.
- Wear rubber gloves when cleaning, washing dishes, or using chemicals.
- Avoid using nails to open, scratch, or pry objects.
- Keep nails at a manageable length to prevent breakage.
- Book infill/maintenance appointments every 2-3 weeks.

What to Avoid

- × Using acetone-based removers on gel or acrylic nails.
- × Picking or forcing off enhancements — this damages the natural nail.
- × Exposing nails to harsh chemicals without gloves.
- × Filing or buffing enhancements at home unless advised.

Warning Signs — Contact Us If:

- ! Nail lifting, greenish discolouration, or unusual odour
- ! Pain, redness, or swelling around the nail or cuticle
- ! Allergic reaction (itching, rash, blistering around the nails)
- ! A broken or cracked enhancement exposing the natural nail
